

# The Strength of Steel

Colorbond® steel, baked on silicon modified polyester produced by the Coated Products Division of B.H.P Steel International. It is uniquely Australian product - developed in Australia for Australian conditions.

Colorbond® is produced on modern computer-controlled coil coating lines at steel plants located at Western Port and Port Kembla. The best available baked on treatments applied under exacting conditions give Colorbond® its clear advantage over post-painted products.

Colorbond® is much more than just color. It has versatility, reliability and strength.

## Applications

Every day more manufactures are recognising the attractive advantages of this colorful Australian product. More and more products made with Colorbond® are encountered in every facet of ordinary life.

### In the factory

Electrical switch boxes, electrical cover-plated fluorescent light fittings, roofing, wall cladding, guttering, downpipes, roll-up doors, drums and pails.

### In the office

Shelving, lockers, ceiling tiles, office partitioning

### In the supermarket

Freezer cabinets, shelving, signs, display

### In transport

Bus body panels, road signs

### On the farm

Farm sheds, roofing, guttering, downpipes, rain water tanks

# Durasteel Weatherboards

## Superior quality

**Colorbond® steel has been comprehensively tested under Australian conditions for its quality, strength and durability**

## Why Colorbond®

Colorbond® is dynamic. Development of special coatings for new applications is part of dynamism.

Coated Products Division is actively involved in development of new finishes and processes to meet the demands of new applications.

## Technical Data

Base material cold reduced steel-zincalume coated Colorbond®, weather resistant under normal conditions- excellent, stain and corrosion resistance- excellent.

Thermal expansion approximately 1mm over 8.000 metres over 60 degrees Celsius. Combustibility to A.S. 30 of 1970 ignitability 0. Heat evolved 0. Smoke evolved 2 or less.

Life expectancy of beyond 50 years.

## Important

Durasteel is manufactured from 24 gauge .6mm T.C.T steel, which is almost twice the thickness of conventional corrugated iron roofing.
