Tint Formulas

These tint formulas are provided to our customers as a guide for wet paint matching to VPI Building Product's vinyl siding. They have been formulated by Dulux Colour Matching using the latest industry equipment.

VPI Building Products strongly recommends that paint samples are obtained by the customer to ensure suitability for the customer's application. Slight modification may need to be made for each individual job depending on the aspect of the building to give a perceived exact match.

VPI Building Products will accept no liability for any loss caused by incorrectly tinted paint as a result of the provision of these formulas to the reseller or end user.

These formulas are for Dulux tint in Dulux Exterior Full Gloss Enamel and are formulated for **4 litre pot sizes with a vivid white base.**
